

Joint pain, Fevers, Rashes and +  
ANA's....The World of Pediatric  
Rheumatology and Beyond

Ricardo Guirola MD M Ed

## Objectives

- Discuss clinical approach for Pediatric patients with suspected rheumatic diseases
- Brief overview of some common conditions with MSK complaints
- Brief overview of some common rheumatic conditions
- Discuss utility of lab testing in the diagnosis of patients with suspected rheumatic disease

## Famous Statements

*Dr. House "ITS NEVER LUPUS"*

## How should we clinically approach these conditions???

Autoimmune Arthritis

		
What society thinks it is.	What people think we take.	What people think it feels like.
		
What people think causes it.	What we really take.	What it really is.

## Definitions

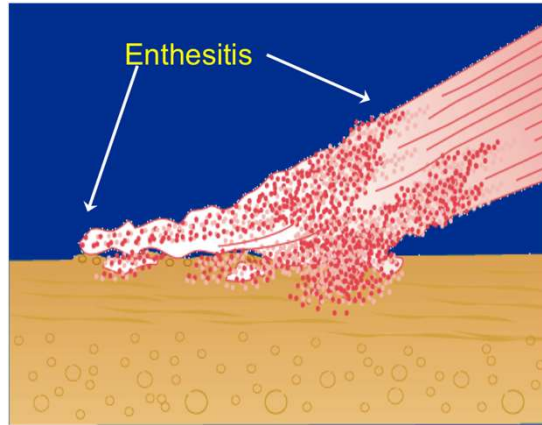

- Arthralgia
  - Artist **formerly** known as joint pain
- Arthritis (objective)
  - **Warmth**
  - **Swelling**
  - **Stiffness**
  - Decreased ROM
  - Erythema +/-

## Tendonitis

# Enthesitis

CookChildren's

# Apophysitis

CookChildren's

## Inflammatory Joint Pain

**REST WORSENS  
SYMPTOMS**

**CookChildren's**

## Non Inflammatory Joint Pain

**Activity Worsens  
Symptoms**

**CookChildren's**

## Always ask the extra questions

- Antecedent history (trauma, infection)?
  - Acute vs Chronic
- **Systemic Symptoms**
  - Fevers
  - Rashes
  - Weight loss
- Extracurricular Activities
  - Athletics
    - Hours per week
  - Previous injuries

## Clinical Pearl

- Acutely Swollen Joint
  - Warmth
  - Fever
- Until proven otherwise.....

## Bottom Line, Why do we Need to Know all this Stuff ??

CookChildren's

## Importance of MSK Medicine

- MSK Complaints in children and adolescents **30%** percent of visits
- National Ambulatory Survey MSK complaints 2<sup>nd</sup> to **cough** and **acne**
- Deficiencies in MSK medicine at resident and student level
- **2000-2010 WHO Bone and Joint Decade**

CookChildren's

## Importance of MSK Medicine

- MSK Symptoms are **Common**?!
- 97% of complaints: NON-RHEUMATIC
  - **YET: 300,000 children in US with arthritis-spectrum disorders**
    - 24,000-30,000 in TX?
    - Rheumatic disorders chronic and require early diagnosis
    - MSK pain **not** universal in children with juvenile arthritis

CookChildren's

## MSK EXAM

- Lack of confidence in MSK exam
  - Leads to unnecessary lab testing
- **Bottom line is practice makes perfect!**

CookChildren's

## pGALS

- Screening tool
- Designed by expert panel
- Questionnaire
- Pictorials
- **Takes 3-4 minutes**

CookChildren's

## Case # 1

- 8-year-old male competitive baseball player for the last 6 weeks has been having daily exquisite discomfort and tenderness to bilateral feet after baseball practice, pain is very severe, causes remarkable limp, in addition some difficulties during school days, due to pain and discomfort, no swelling reported, no stiffness reported, evaluated by PCP, x-rays of feet were negative, labs were normal except for mildly positive **ANA of 1:80 speckled**

CookChildren's

## Case # 1

- ROS WNL
- PE- VS WNL
- EXAM WNL except for *magical* test called heel squeeze

- DX is Severs Disease

CookChildren's

But wait a minute what about the  
ANA???

CookChildren's

## LAB GOLDEN RULES

- 1) KNOW THE LAB
- 2) KNOW HOW LAB IS PERFORMED
- 3) **KNOW WHAT TO DO WITH LAB RESULT AND PATIENT**

CookChildren's

## Rheumatologist=Vampire

- Basic labs much more relevant
  - Complements
    - SLE
- ANA and RF
  - Poor sensitivity for pediatric population
- Labs helpful when you are sure about the diagnosis

CookChildren's

## A few words about ANA's

- Can be positive in :
  - **normal person – up to 15-30 %**
  - other autoimmune diseases
  - chronic liver disease
  - neoplasms
  - TB, malaria, SBE, EBV, HIV, Mycoplasma
- **Flip a coin!!!** (positive 40-50% in JIA)

CookChildren's

## So just because a kid has a + ANA....

- Does not exactly mean
  - Autoimmunity
- ELISA/IFA
  - Commercial labs
  - ACR recs...
- Unfortunately if SLE
  - 100 %

CookChildren's

Use caution when ordering...

CookChildren's

## The Infamous Rheumatoid Factor

- Immunoglobulin against FC portion of IgG
  - IgM
- **Only positive in 3-5% of all JIA!!!!**
- Positive
  - 1-4% of population
  - Viral Infections
  - TB
  - Hepatitis
  - Malignancy

CookChildren's

## Other more “sophisticated” tests

- CCP
  - Very specific to inflammatory arthritis
  - RF + JIA and adult RA
- HLA B 27
  - + in 5 % of Caucasians
  - Specific for Axial Arthritis
  - Not sensitive

**CookChildren's**

## My Joints Really Hurt....yet I **do not** have JIA or SLE!

**CookChildren's**

## Hypermobility Syndromes

- 2-3 % of population
- Beighton Score
  - 6 and above
- Arthralgia frequent
  - Increased activity
- Management
  - Rest
  - ICE
  - PT
  - Analgesics

**CookChildren's**

## Hypermobility Syndromes

- Spectrum?
  - EDS?
  - Genetics?
- POTS/Dysautonomia
- Chronic Pain
- GI dysfunction
- MAST Cell

**CookChildren's**

## Growing pains

- Prevalence of 4-37%
- 2-12 yrs of age
- Classic presentation
  - Pain in PM or evening
  - Increased activity
  - Resolves by next day
  - Analgesics or comfort
  - PE nl
  - Labs nl

**CookChildren's**

## Overuse Injuries

- All the “tendinitis’s”
  - Patella
  - Achilles
  - Pes anserine
  - Low back pain
  - Throwing injuries
- Overtraining
- Poor Biomechanics

**CookChildren's**

## Poor Biomechanics

- Growth
- Decreased Proprioception

## Traction Apophysitis

Sinding Larsen Johansson

ISELIN DISEASE

## Case #2

- CC: “All my joints hurt”
- HPI:
  - 7 yr. old boy, arthralgias
    - LE
  - 2 months duration
  - No AM stiffness
  - No limp or swelling
  - Fatigue, no weight loss
- **Wakes up in pain 5/7 nights**
- ESR 47, CRP 7.5 (elevated)
- Hgb 10.9 (MCV 80)
- Sent to ER due to persistence of symptoms

## Case 2

- VS tachycardia
- GEN: mild pallor
- MS: mild reduced flexion of left wrist, no effusions or other joint abnormalities
- **Biggest concern?**

CookChildren's

## Clinical Pearl # 2

- Malignancies common in children
  - Often have MSK complaints
  - **BONY PAIN**
- Ill appearing
- Cytopenias
  - Rare in JIA

CookChildren's

Lets head into the Rheumatology realm!!!

CookChildren's

### Case 3

- 2 yr old
  - Limp x 2 months
    - Left leg??
  - Worse in am
  - Better in afternoon
  - Worse during naps??
- Told growing pains??
- SENT TO ER

CookChildren's

## Case 3

- Exam
- VS stable No fever
- **Left knee 2 + effusion with warmth lacks full extension**
- Rest of exam nl
- Labs CBC nl
- ESR and CRP mildly elevated
- X rays mild knee effusion

**CookChildren's.**

## Kids get arthritis too....

- Over 60,000 children in US
- Multi-disciplinary and multi-modal tx
- **Diagnoses of exclusion**
- **Juvenile Idiopathic Arthritis**
  - Unknown etiology

**CookChildren's.**

## Criteria for Classification of JIA

- Age at onset <16yr
- Evidence of arthritis
- 6 wks
- EXCLUSION diagnosis
- **AT NO POINT IS THERE MENTION OF JOINT PAIN SOLELY**

CookChildren's

## Juvenile Idiopathic Arthritis

- Oligoarthritis
  - Persistent
  - Extended
- Polyarthritis
  - RF (-)
  - RF (+)
- Systemic Onset
- Psoriatic Arthritis
- Enthesitis Related Arthritis

CookChildren's

## JIA oligoarticular

- Younger children
- < 4 joints affected
- Chronic Uveitis common
- Pain not severe
- **ANA +**
  - **30 % UVEITIS**

**CookChildren's**

## Polyarticular JIA

- Teenagers or older kids
- Usually affecting hands
  - Multiple joints
- >5 joints
- **RF +/-**
  - RF + = RA
    - CCP
  - RF –
- **TREATMENT** 

**CookChildren's**

## Systemic JIA

- Daily Fever
  - Quotidian pattern
- Salmon like rash
  - Dermatographism
- **Arthritis**
- EXCLUSION
- Macrophage Activation Syndrome
  - **Ferritin**

## Enthesitis Related Arthritis

- Stiffness
- Enthesitis
- Attention to SI joint
  - Axial Skeleton
- Juvenile Ankylosing Spondylitis
  - Radiographic
- HLA B 27

## Psoriatic Arthritis

- Classic Rash
  - 30-40 % absent
- First line relative
- Asymmetric small joints
- Uveitis
  - 30%
- Dactylitis
- HLA B27

**CookChildren's**

## Medications for JIA

- NSAIDS
- DMARDS
  - Methotrexate
    - Oral
    - SQ
    - IV
- Corticosteroids
  - Oral
  - IV
  - Intraarticular

**CookChildren's**

## Medications for JIA

- **Biologics**
  - TNF  $\alpha$  (**JIA**)
    - **Etanercept**
    - Adalimumab
    - Infliximab
  - IL-1 (**Systemic**)
    - **Anakinra**
    - **Canakinumab**
  - IL-6 (**Systemic/Poly JIA**)
    - Tocilizumab
- **Infections (TB)**
- **Malignancies ?**

CookChildren's

## Anterior Uveitis

**Frequent screening:**

ANA +, Oligoarticular JIA .

CookChildren's

## Case 4

- 13 year old female previously well until the last **3 months** when she developed
  - **30 lb weight loss**
  - **Fatigue**
  - decreased appetite noted by parents
    - intentional or unintentional?
  - dancer
  - honor roll student

CookChildren's

## Case 4

- PE:
  - VS: T 98°F, HR **100→125, BP 130/70, RR 12**
  - Weight 101 lbs, Height 5"4
  - Skin: No rashes, **hair thinning particularly over temporal regions bilaterally**, eyebrows intact
  - HEENT: **palatal ulcer**, gingival inflammation
  - Neck: No thyromegaly
  - CVS: tachycardia with mild activity otherwise negative
  - Lungs: CTA

CookChildren's

## Case 4

- ABD: quiet BS, no masses palpated
- **Extremities: mild pitting edema of lower extremities to mid shins**
- Neuro: CN II-XII intact, normal gait, 2+DTR's, normal strength in all extremities
- **MSKE: Pain with flexion and extension of wrists, unable to perform pad to palm or make fists bilaterally. Swelling of 2<sup>nd</sup> and 3<sup>rd</sup> PIP's bilaterally. Otherwise negative.**

CookChildren's

## LABS for CASE 4

- Labs
  - UA: microscopic **hematuria and 3+ proteinuria**
  - **+ hemolytic anemia**, mild thrombocytopenia
  - Elevated AST and ALT
  - **ANA >1:1280 Homogenous**

CookChildren's

How do patients with SLE present?

CookChildren's

**SLE: Etiology & Pathogenesis...**

CookChildren's

## SLE : Classification Criteria ACR (1997)

### **Total 11 :**

**3 skin** (malar rash, discoid, photosensitivity)

**3 itis** (oral ulcers, arthritis, serositis)

**3 major organs** (renal, neurologic, hematological)

**2 labs** (ANA, specific auto antibodies including APLA)

**Joint pain and + ANA.....**

**4 out of 11 criteria provide a sensitivity of 96% and a specificity of 96%.**

**SLICC CRITERIA 2012**

**CookChildren's**

## SLE: MSK Manifestations

- Non-erosive arthritis
  - $\geq 2$  joints
  - Symmetric
- **Fatigue**
- Weakness
- Myositis
- Avascular necrosis

**CookChildren's**

## SLE: Skin and Mucosa

Prevalence of 76%

Butterfly rash  
Discoid lesions

**CookChildren's**

Photosensitivity  
Oral/nasopharyngeal ulcers

**CookChildren's**

## SLE: Severe Organ Involvement

- **Renal Disease (80%)**
- Neuropsychiatric lupus
  - Central nervous system
  - Peripheral nervous system
- Pulmonary disease
- Cardiac disease

CookChildren's

## Dermatomyositis

- Proximal muscle weakness
- Heliotrope rash
- Gottron's papules
- **Labs (elevated):**
  - AST, ALT
  - CK, aldolase, LDH
  - **ANA ???**

MRI- diffuse muscle inflammation

Muscle biopsy: inflammation, atrophy

CookChildren's

## Henoch-Schönlein Purpura (HSP)

- Purpura
  - Petechiae
- Joint complaints
  - Soft tissue swelling
  - +/- arthritis
- Abdominal pain
  - Intussusception
- Renal involvement

CookChildren's

## Scleroderma Spectrum

-limited disease:

morphea

linear scleroderma

coup de sabre

More common than systemic sclerosis

Heart, GI tract, Lung involvement

CookChildren's

## So If I were a primary care doc...??

- History
  - Inflammatory
  - Non Inflammatory
  - Detailed history
- PE=
  - CHECK ALL JOINTS!
- MSK EXAM

CookChildren's

## So If I were a primary care doc...??

### Labs to get

- Basic labs
  - CBC
  - CMP
  - UA
  - CRP
  - ESR
- Infection
  - Blood Cx
  - Gram Stain and Cx
- Malignancy
  - Peripheral smear
  - LDH/URIC ACID

CookChildren's

## So If I were a primary care doc...??

### Imaging to get

- Immediate MRI or CT 

- Basic X rays
  - Exclude trauma
  - Malignancy
- Concerns with inflammatory MSK condition
  - CONTRAST

CookChildren's

## So If I were a primary care doc...??

### Treatment and Management

- NSAIDS OK to use
  - Unless contraindicated
  - LIVER
  - KIDNEY
  - GI
- Naproxen
  - 10-20mg/kg BID
- Careful with opiates!
  - Amplified Pain

CookChildren's

## So If I were a primary care doc...?? Treatment and Management

- Don't use corticosteroids
  - Until knowing diagnosis
  - Exclusion
    - Malignancy
    - Infection
- **When necessary call your friendly Rheumatologist**

CookChildren's

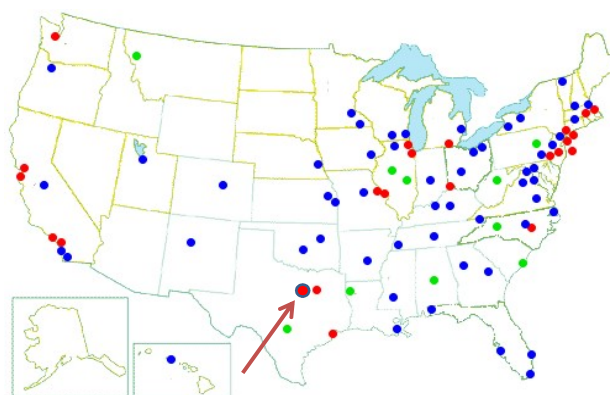

## Summary and Conclusions

- Kids do get arthritis but...
  - **Inflammatory arthritides are diagnoses of exclusion**
- MSK complaints may be features of systemic Dx
- **Trust your Hands, Eyes, and Ears (H + P)**
  - **MSK EXAM**
- **Labs mostly useless, unless...**
  - **You know what you are looking for!**

CookChildren's

## When necessary call your friendly Ped Rheumatologist

- Pediatric Rheumatology Centers with Board Certified Pediatric Rheumatologists
- Pediatricians or Rheumatologists treating Children with Rheumatic Diseases (w/o Center)
- Pediatric Rheumatology Centers with Board Certified Pediatric Rheumatologists and Approved Fellowship Training Program
